

Arthropod Classification Activity

“Bugs” Post-Visitation Activity

Time:

30 – 45 minutes

Grades:

3 – 8

Activity Summary:

Students learn how to classify and identify arthropods using an arthropod identification chart.

Goal:

To teach students how to classify and identify arthropods using an arthropod identification chart.

Anticipatory Set:

- Tell the Students (TTS): 1.7 million different organisms have been identified on Earth.
- TTS: 7,000 new insect species are discovered every year.

Input:

- TTS: that scientists classify living things into groups.
- Use the following chart to compare the classification of a house cat and dog.

	<u>House Cat</u>	<u>Dog</u>
Kingdom:	Animalia	Animalia
Phylum:	Chordata	Chordata
Class:	Mammalia	Mammalia
Order:	Carnivora	Carnivora
Family:	Felidae	Canidae
Genus:	<i>Felis</i>	<i>Canis</i>
Species:	<i>Felis catus</i>	<i>Canis familiaris</i>

- TTS: Cats and dogs are in the same kingdom, phylum, class, and order, but belong to different families.
- Ask the Students (ATS): to name other organisms that would be in the same family as a cat or dog.
- Hand out a copy of the “Arthropod Pictures” worksheet.

- ATS: to observe drawings and determine what characteristics all organisms share. They include jointed legs, bilateral symmetry, and appendages.
- TTS: these common characteristics help scientists organize them into a phylum, within the Kingdom Animalia called Arthropoda.
- Hand out the “Arthropod I.D. Chart” and explain that organisms in the Phylum Arthropoda are classified into subgroups called Subphylum, Class, and Order.
- Arthropods in the class Insecta have six legs and a body divided into three segments – head, thorax, and abdomen.
- Scientists use an arthropod identification chart to identify unknown organisms and relate them to more familiar species.

Model:

- Discuss the following with students:
 - Hold up Arthropod Pictures worksheet. Ask students to identify which subphylum organism A (Mandibulata) belongs to by having them read descriptions on Arthropod I.D. Chart.
 - ATS: to read each Class description located below Mandibulata and decide which Class organism A belongs to (Insecta). Continue to Order (Coloptera). Write letter of organism in answer box located below Order it belongs to.

Guided Practice:

- TTS: they will be using the Arthropod Identification Chart to classify each organism on the “Arthropod Pictures” worksheet.
- TTS: all organisms seen on the Arthropod Pictures worksheet are in the Kingdom Animalia and Phylum Arthropoda.
- TTS: their job is to find which Subphylum, Class, and Order each organism belongs to.
- REMIND STUDENTS to begin from top of chart (Subphylum) when classifying.
- Give answers.

Instructional Materials:

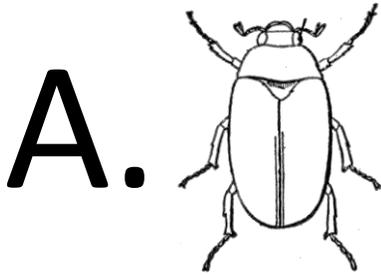

- Arthropod Pictures
- Arthropod I.D. Chart
- Answers

Arthropod Pictures

Each of the following creatures represents a group of arthropods. First identify all 10, and then write the letter of each one in the correct place on the Arthropod I.D. Chart.

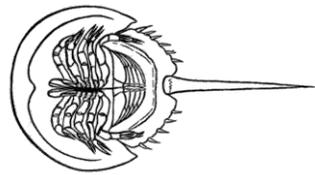

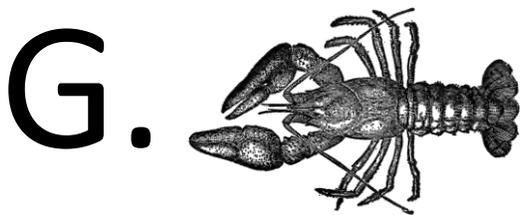

B.

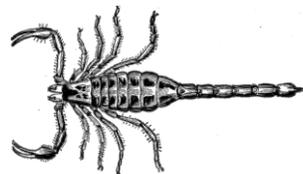

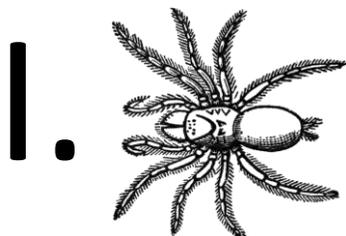

D.

F.

H.

J.

Answers: A = Coleoptera
B = Cirripedia
C = Scolopendromorpha
D = Odonata
E = Amphipoda
F = Acari
G = Decapoda
H = Xiphoxura
I = Araneae
J = Scorpionida
